

THE BIG ASS CALENDAR — how to use it (the very simple version)

Print me. Stick me near the desk. 2026-08-11.

Important: today the calendar lives only inside Marco's MacBook. Part 1 puts it on the internet. Do Part 1 first — the phones come after.

PART 1 — Marco's MacBook Pro · one time · ~15 minutes

1. Open **Terminal**.
2. Copy-paste this line and press Enter: `cd /Users/mcsk/_MCSK/_D0Cs/_claude/_bigass_calendar &&cclaude`
3. When Claude answers, say exactly:

"Read CLAUDE.md. Do the one-time PRIVATE setup exactly as written there: install the requirements, generate the push keys, encrypt the calendar with a passphrase I will choose, and put it online on GitHub Pages. Ask me for the passphrase when you need it, and give me the final link."
4. Follow anything Claude asks — it will ask you to **invent a passphrase**. Shape: **four or five random everyday words, small letters, with spaces** — like `walnut tango ladder moon` (don't use that one, invent your own; Claude can roll random words for you). No names, no birthdays, nothing from your crypto wallet. Write it on paper; you three will each type it once. It may also need your GitHub login once. At the end it gives you a **link**.
5. **WhatsApp that link to Inna**. Keep it yourself too. That link IS the calendar.

How private is it? What sits on the internet is scrambled nonsense. The passphrase unscrambles it — typed **once per device**, then that device stays unlocked.

PART 2 — Marco's iPhone · 2 minutes · only after Part 1

1. Open the link in **Safari**. If the wall asks for the passphrase, type it (once).
2. Tap the **Share** button (square with an arrow).
3. Tap **"Add to Home Screen"** → **Add**.
4. Open the new * **icon** on your Home Screen.
5. Tap the  button → **Allow**.
6. Tap **"send to Marco"**  → choose **Notes** (a note to yourself).
7. Back on the MacBook: copy that note's text, open Claude in the calendar folder (step 1–2 above), and say:

"File this subscription for Marco: (paste the text)"

PART 3 — Inna's iPhone · 2 minutes

1. She opens the link you sent — in **Safari** — and types the passphrase you gave her (once).
2. **Share** → "**Add to Home Screen**" → **Add**.
3. She opens the * icon, taps 🔔 → **Allow**.
4. She taps "**send to Marco** 📩" → WhatsApp → you.
5. You paste it to Claude: "**File this subscription for Inna: (paste)**".

If 🔔 shows instructions instead of asking permission — that's normal, it's telling her to do step 2 first. If it says the phone can't do it: Settings → General → Software Update (needs iOS 16.4 or newer).

PART 4 — Inna's MacBook Air · 30 seconds

1. Open the link in any browser. **Bookmark it**. That's all — it always shows the current wall.
2. Optional: tap 🔔 there too. If it works, pings on the Mac as well; if it complains, ignore it — the iPhone is the one that matters.

EVERY DAY — how it actually works

Marco, on the MacBook (about 1 minute): Open Claude in the calendar folder and just talk: - "Add: pay the insurance, September 25, mine, hard deadline." - "Mark the school payment done." - "Move the Bak proposal to Friday." - "Send Inna a nudge about the tour." - "Turn on the morning digest." ← say this once; after that, mornings ping by themselves when something is due.

Claude edits the wall, checks it, and publishes. You never touch code.

Both of you, on the phones: - Glance at the wall. Colors: **yellow = Marco, green = Inna, pink = together, red tape = cannot move**. - Tap a post-it → it tells you exactly **what to DO and how many minutes**. - Finished? Tap **DONE** ✅ → send. Marco pastes it to Claude, the post-it turns grey. Victory.

Sunday: 30 minutes together in front of the wall (it's already on it — green post-it, Aug 16).

If something looks wrong

- **Wall looks old on the phone** → tap ⌵ (top of the screen).
- **No pings for days** → Marco says to Claude: "*test the push.*"
- **Anything else** → Marco opens Claude in the folder and describes it in plain words. That's the repair shop.
